

The European Institute for Outdoor Adventure Education and Experiential Learning (EOE) was founded in October 1996 in Spital/Pyhrn in Austria. It is the first Europe-wide cooperation between experts working together on further developing a pedagogical practice that uses the educational sensory potential inherent in adventure in challenging natural situations.

The title, *Other Ways of Learning*, corresponds with the conceptual basis of the European Institute, which celebrated its 10th anniversary in 2006. The contributions in this book illustrate the various stages of the development of the Institute and discuss the central conditions of the other way of learning in outdoor adventure education and experiential learning practice.

The articles show the range of those topics and questions that the Institute was concerned with between 1996 and 2006 and which are among the key issues of our times: such as the question of the consequences of globalisation and technological development, ecological responsibility and sustainability and of the cultural differences of outdoor adventure education, among many others.
